NRC Publishes Annual Report to Congress on Nuclear Security Inspections

The Nuclear Regulatory Commission has made available to the public an unclassified version of its [annual report to Congress](#) detailing the previous year's security inspection program. The report is required under the Energy Policy Act of 2005.

The report covers the NRC's security inspection program, including force-on-force exercises, for commercial nuclear power reactors and Category I fuel cycle facilities for calendar year 2015.

“The report provides information regarding the overall security and safeguards performance of the commercial nuclear power industry and Category I fuel cycle facilities to keep Congress informed of the NRC's efforts to oversee the protection of the nation's civilian nuclear power infrastructure and strategic special nuclear material against terrorist attacks,” NRC Chairman Stephen G. Burns said.

In 2015, the NRC conducted 242 security inspections at commercial nuclear power plants and Category I fuel cycle facilities. Those included 22 force-on-force inspections, involving simulated attacks on the facilities to test the effectiveness of a licensee's security. The NRC's security program and publicly available results of the inspections are discussed in the report.

Whenever NRC inspectors identify a security finding during an inspection, they ensure the licensee implements appropriate compensatory measures to correct the situation. Details of security findings are considered sensitive and not released to the public.
